

# SOP Sample Workshop

After obtaining my degree in Computer Science, I joined Accenture in August 2014. Experience and observation has led me to realise the difference a skilled and educated administrator can make to any organization. Thus I choose to take my next step towards professional progress by applying to MBA.

During my current employment a significant achievement was when I was appointed a single point of contact for "Hammer Automation Tool" for my project to help improve efficiency and reduce manual efforts. As a recognition I got Certificate of Appreciation and Star of The Month Award. Recently I participated in a competition named as code-A-Thon in our project and i got the first rank and got the opportunity to give presentation of my idea in front of the CIO of Anthem which is my client. This along with my promotion to Software Engineering Analyst in one year showed the confidence my managers had in my abilities.

While I possess experience and a Degree in Engineering I realise that to grow further in my career I have to learn the fields of business administration, Finance and Marketing. I want to be well-equipped before chasing any further managerial ambitions and require a management course that will help me strengthen my body of knowledge, professional network and skill set.

I believe the two year full time core MBA program at NMIMS which is equipped with state of the art facilities, a good professional network, a strong reputation and a case method system that helps simulate real world business scenarios which will give me a practical experience that fits the bill.

My past experiences in my project in areas of Innovation & Optimization will help me bring to the table knowledge that will be beneficial for the other students I collaborate with, makes me a good candidate for the Master in Business at your college.
